Subject: rehabilitation of customs control activities through scanner system at Passo Nuovo SOT

Dear Customers,

We hereby communicate that the activities of customs control through scanner system have been reactivated at Passo Nuovo SOT.

Differently from the past, the new instrumentation will be now used also for semitrailers and food cargoes scans, with no compromise on their safety.

The advantage of the scanner control system consists in providing quick evidence of the cargo contained in trailers and containers and, as a consequence, it allows a rapid release of the customs declarations that are deemed compliant with regulations, with no need to proceed with a material inspection of the goods.

Moreover, the reactivation of the scanner control procedure should foster a reduction of the requests for cargo downloading aimed at analyzing goods and documentation controls reports selected by the Customs, allowing a reduction of the costs and time needed to release the goods.

We remain at your disposal for any kind of doubts.

Best regards.
